VOLUNTEER EXPERIENCE

Board of Directors, Student Representative - eCampusOntario, Ontario, Canada

Apr 2026 – Present

- Serve as the College student representative on a provincially funded Board of Directors supporting digital learning across Ontario's postsecondary institutions
- Contribute to strategic discussions on innovation, accessibility, and technology-enabled education

IT Club, Conestoga College, Conestoga Student Club Lead

Secretary | Volunteer | Event Organizer | Sept 2025 – Present

- Organized workshops, pitched big campus events and worked with the fellow organizer team to succeed
- Design promotional graphics and visual materials to support club activities and engagement
- Lead and assist beginner-friendly workshops while helping oversee smooth event execution

Google Developer Group (GDG Waterloo)

Community Member | Volunteer | Event Organizer | Collaborator | Teaching Assistant | Mar 2026 – Present

- Supported the planning and organization of workshops, technical talks, and collaborative events for the students
- Collaborated with organizers and speakers to coordinate events and promote participation among students

PROJECTS

COIL Project – Distributed Robot Control System - C++/Docker | Feb 2026 – Apr 2026

- Designed and developed a containerized C++ web server using the Crow framework to enable remote robot command and control.
- Implemented TCP and UDP communication protocols to support real-time data transmission between distributed system components.
- Created a simple GUI for sending commands and monitoring system responses.

LegalAI – AI-Powered Legal Assistant - Hackathon | Feb 2025

- Developed an AI-driven application to interpret landlord-tenant legal queries in Ontario using NLP techniques.
- Designed structured and unstructured data flows using JSON-based legal datasets.
- Built backend services with Python and Flask to process user queries and generate responses.
- Collaborated in a team environment to design, develop, and present a working prototype within a limited timeframe.

DriveTracker – Mobile Driving Analytics App – Supabase | ReactJs | expo | Oct 2025 – Dec 2025

- Built a mobile application using React Native and PostgreSQL to collect and analyze GPS-based driving data.
- Designed and implemented database schemas and SQL queries for data storage, retrieval, and analytics.
- Developed logic to calculate driving scores and identify performance trends.
- Transformed raw data into visual insights for end users, improving usability and decision-making.
